

COMPUTER TEACHER

Lester Viloria

About

I am an enthusiastic and dedicated Computer Teacher with a passion for integrating creativity and technology in the classroom. With a background in graphic design, video editing, and frontend web development, I aim to inspire students to become confident and capable digital creators.

My teaching approach blends technical skill-building with real-world application, allowing students to explore projects that are both educational and engaging. Whether it's designing digital posters, editing short videos, or creating simple websites using HTML, CSS, and JavaScript, I encourage hands-on learning that builds both technical competence and creative expression.

I believe that technology is a powerful tool not just for learning but also for self-expression and future career readiness. I am committed to fostering a learning environment where students feel supported, curious, and motivated to explore the digital world.
